

Appl. No. 10/630,184
Andm. dated July 6 2005
S Supplemental Reply to Office Action of December 27, 2004

CLAIMS

1. (Previously Amended) An alkaline cosmetic composition having a pH adjusted to about 8.0 to about 9.5, said composition being effective against skin wrinkling, said composition comprising carnosine dispensed in an alkaline cosmetically acceptable vehicle in an effective antiwrinkle amount of about 0.5% to about 50% by weight of carnosine or complex salt of carnosine or derivative of carnosine or complex salt of carnosine, said derivative being selected from the group consisting of anserine, homocarnosine, N- α -acetyl carnosine and carnosine or mixtures of carnosine or complex salt of carnosine and said derivative.
- 10 2. (Cancelled) ~~The alkaline cosmetic composition claimed in Claim 1 wherein carnosine, derivative of carnosine or mixture of carnosine and derivative thereof is present in amount of about 0.5% to about 50% by weight.~~
- 15 3. (Previously Amended) The alkaline cosmetic composition claimed in Claim 1 wherein carnosine, said complex or said derivative or mixture of carnosine or said complex with said derivative is present in amount of about 1.5% to about 30% by weight.
- 20 4. (Previously Amended) The alkaline cosmetic composition claimed in Claim 1 wherein carnosine, derivative thereof or mixture of carnosine and derivative therenf is present in amount of about 10% to about 20% by weight.
- 25 5. (Original) The alkaline cosmetic composition claimed in Claim 1 wherein carnosine is present.
6. (Previously Amended) The alkaline cosmetic composition claimed in Claim 1 wherein N- α -acetyl carnosine is present.
